

Care Management

Streamline your processes and improve health outcomes with confidence.

Saisystems Health’s community-embedded care management provides a holistic view of the patient throughout the entire healthcare journey. The integrated model targets gaps in care related to treatment and patient management through our proprietary software, *intriCare*. Population stratification, risk level assessments and more are a touch away with the real-time, secure platform. We specialize in chronic, oncology and CMS OCM care management.

Enrollment based on risk and need with care management teams of nurses, social workers and care coordinators creating a safety net around high-risk patients.

Personalized care plans are designed, prioritizing the management of symptoms, medication side effects, comorbidities, barriers to care, and psychosocial needs.

Improved patient engagement and clinical outcomes through enhanced adherence to medications and prescribed regimens.

Our Proven Outcomes

◆ 52% Decrease in Hospital Admits | 35% Reduction in Claims Cost | 95% Engagement Rate ◆
